Award Number: DAMD17-00-1-0271

TITLE: A Comprehensive Postdoctoral Training Program in Breast
Cancer

PRINCIPAL INVESTIGATOR: Robert B. Dickson, Ph.D.

CONTRACTING ORGANIZATION: Georgetown University Medical Center
Washington, DC 20057

REPORT DATE: July 2001

TYPE OF REPORT: Annual Summary

PREPARED FOR: U.S. Army Medical Research and Materiel Command
Fort Detrick, Maryland 21702-5012

DISTRIBUTION STATEMENT: Approved for Public Release;
Distribution Unlimited

The views, opinions and/or findings contained in this report are those of the author(s) and should not be construed as an official Department of the Army position, policy or decision unless so designated by other documentation.

FOREWORD

Opinions, interpretations, conclusions and recommendations are those of the author and are not necessarily endorsed by the U.S. Army.

N/A Where copyrighted material is quoted, permission has been obtained to use such material.

N/A Where material from documents designated for limited distribution is quoted, permission has been obtained to use the material.

N/A Citations of commercial organizations and trade names in this report do not constitute an official Department of Army endorsement or approval of the products or services of these organizations.

N/A In conducting research using animals, the investigator(s) adhered to the "Guide for the Care and Use of Laboratory Animals," prepared by the Committee on Care and use of Laboratory Animals of the Institute of Laboratory Resources, national Research Council (NIH Publication No. 86-23, Revised 1985).

N/A For the protection of human subjects, the investigator(s) adhered to policies of applicable Federal Law 45 CFR 46.

N/A In conducting research utilizing recombinant DNA technology, the investigator(s) adhered to current guidelines promulgated by the National Institutes of Health.

N/A In the conduct of research utilizing recombinant DNA, the investigator(s) adhered to the NIH Guidelines for Research Involving Recombinant DNA Molecules.

N/A In the conduct of research involving hazardous organisms, the investigator(s) adhered to the CDC-NIH Guide for Biosafety in Microbiological and Biomedical Laboratories.

COMPREHENSIVE POSTDOCTORAL TRAINING PROGRAM IN BREAST CANCER BIOLOGY

INTRODUCTION

The Comprehensive Postdoctoral Training Program In Breast Cancer Biology has successfully completed its first year. The goal of the program is to significantly extend our existing, highly successful Doctoral Training Program in Tumor Biology and several Cancer Center mechanisms that provide traditional postdoctoral training and junior faculty career development. The education and training of new investigators is essential to our progress in the prevention, detection, diagnosis, and treatment of breast cancer. The Postdoctoral Training Program in Breast Cancer provides comprehensive career development and integrates interactive research in basic biology of breast cancer, formal and informal coursework in key areas, and individualized guidance in career development. The program is enriched with both new and existing courses of interest to postdoctoral fellows covering scientific writing, teaching methodologies, scientific resources and technologies for cancer research, ethics in science, career development seminar series, and provides a firm foundation in the skills needed to succeed in a career science, as well as a focused research experience in basic breast cancer biology in a strong laboratory environment. Additional programmatic activities include monthly Oncology Grand Rounds, weekly Tumor Biology Seminar Series, and weekly journal clubs. The program makes use of the existing organizational structure of the Interdisciplinary Doctoral Training Program in Tumor Biology and incorporates a multi-disciplinary faculty who are devoted to research and education in breast cancer.

In the future it is envisioned that postdoctoral fellows will also be given the opportunity to choose multiple mentors who will form a guiding committee, enabling them to seek research and career advice from a number of senior faculty. The development of this more structured Tumor Biology Postdoctoral training program will provide excellent preparation for successful careers in cancer research.

BODY

Training and Research Accomplishments

The accomplishments of this program include the recruitment and progress of postdoctoral fellows. In the past 10 years, over 100 postdoctoral fellows have been trained by our Tumor Biology program preceptors. These fellows have an outstanding record of research productivity and peer-reviewed publication, and over 50% of them have obtained academic faculty level positions.

In the first year of the program we have funded two post doctoral fellows for research specific to breast cancer. Fadwa Attiga, PhD has successfully completed her first year in Stephen Byers' lab, researching the cross regulation between the IKK and the beta-catenin signaling pathways in breast and colon cancer. Dr. Attiga is now studying how different kinases regulate the level of oncogene beta-catenin in tumor cells and identifying the key players in the signaling cascades that alter the beta-catenin protein level and transcriptional activity in tumors. Dr. Attiga has attended courses TBIO546 – *Resources for Cancer Research* and Pharmacology/Biochemistry 528 – *Modern Methods in Molecular Biology*.

Also in the DOD postdoctoral program, Tushar Baran Deb, PhD has completed his first year of research in Dr. Robert Dickson's lab studying the EGFR and ErbB2, ErbB3, and ErbB4 pathways which are utilized in c-Myc oncoprotein-overexpressing mammary epithelial cells (Myc83 cells) to circumvent normal apoptotic mechanisms. For these studies, Dr. Deb used transgenic mouse mammary epithelial cells to understand the mechanism of EGF-dependent survival signaling in Myc83 cells.

In terms of recruitment, we have recruited Marcia Noble, Ph.D. to the Comprehensive Postdoctoral Training Program in Breast Cancer Biology. Dr. Noble will begin her postdoctoral fellowship in September 2001 under collaborative mentorship of Dr. Michael Johnson and Dr. Robert Dickson. She is expected to develop a research project on the mechanism of VEGF to promote breast cancer metastases in transgenic mouse models.

As noted earlier, our Postdoctoral Program incorporates elements of our existing Tumor Biology PhD program as well as new, Postdoctoral Training-specific elements as a part of a Breast Cancer Prevention Track. In addition to the existing courses offered through the Interdisciplinary Doctoral Training Program in Tumor Biology, new course components have recently been incorporated into the Breast Cancer Prevention Track. These include a new course in Biostatistics, called *Applied Biostatistics* offered in the Spring, that focuses on statistical design and methodology for research, and a new course on Cancer Genetics, called *Genetics, Health, and Society in the 21st Century* also offered in the Spring, which focuses on practical and ethical questions raised by genetic information and technology. In addition, we have now established *Career Development/Opportunity* seminar series that will begin in the fall.

KEY ACCOMPLISHMENTS

- *Recruitment of Trainees and Progress of Trainees:*
We are currently in the process of recruiting class #2 of our Postdoctoral Trainees. Based on our prior years' experience, we anticipate an excess of 200 applicants. We have currently identified one new fellow, Dr. Marcia Noble, who will begin 9/01. We anticipate filling our second slot for class #2 by later in Fall, 01. Two postdoctoral

fellows enrolled in our DOD program, Drs. Attiga and Deb, will be entering their second year in the program studying breast cancer biology.

- *Development of Courses:*

The following courses were revised or developed for the Breast Cancer Prevention track of the Interdisciplinary Doctoral Training Program in Tumor Biology – *Biostatistics and Experimental Design, Cancer Genetics, Topics in Molecular Epidemiology of Cancer Risk, and Principles of Cancer Prevention*. In addition, new courses *Genetics, Health and Society in the 21st Century*, and *Applied Biostatistics* have been added to the program. An academic/non-academic career development seminar series will be offered in the fall.

REPORTABLE OUTCOMES

- *Publications:*

Tushar Baran Deb, Ph.D. -

Deb, T.B., Wong, L., Wells, A., Johnson, G.R. (2001). Mitogenic signaling by a kinase-I inactive epidermal growth factor receptor in fibroblast requires ErbB2. (In Preparation).

Wang, JK, Deb, T, Cottichia, C, and Dickson RB. P38 MAPU mediated apoptosis and survival signalling in c-Myc-overexpressing mouse mammary carcinoma cells. (Under revision for resubmission to *Cell growth and Different*.

Fadwa Attiga, Ph.D. -

Dr. Attiga currently has a manuscript in preparation, "Tumor necrosis factor alpha regulates NFkb and beta catenin signaling in colon cancer cells." (In Preparation).

CONCLUSIONS

The goal of the program is to significantly extend our existing, highly successful Postdoctoral Training Program in Cancer with a new specialization in Breast Cancer Biology. We have successfully completed our first year of the Comprehensive Postdoctoral Training Program in Breast Cancer Biology and have two postdoctoral fellows who are now entering their second year of research. We have recruited one new postdoctoral to the program who will begin in September 2001; recruitment for our second class will be completed later in Fall, 2001.
